

AI Development Sub-Team Progress Report and Strategic Outlook

Participants:

- Mateusz Klocek
- Daniel Swinbank
- Jacob Stephens

Agenda Topics:

1. Next Steps for AI Development
 - Identified key areas for improvement and enhancement in our ongoing projects.
2. Potential data adaptation to use case and considerations.
 - Brainstormed and deliberated on potential strategies for adapting historical weather and climate data to optimize the net total power output of Photovoltaic (PV) Devices.
3. Model creation and implementation
 - Evaluated the progress of model creation and its implementation.
 - Acknowledged the advancements made by Jacob in utilizing the Anaconda Jupyter Notebook program for training provisional models.
4. Model training next steps
 - Outlined the roadmap for the upcoming stages in model training.
 - Discussed strategies for refining and fine-tuning our models to achieve optimal results.

Key Highlights

1. Model data adaptations
 - Engaged in a comprehensive exploration of methods to incorporate historical weather and climate data into our models, with a specific focus on optimizing the power output of PV Devices.
2. Existing Model Analysis
 - Celebrated the accomplishments of Jacob, who has successfully created provisional models trained on weather data.
 - Recognized the strides made with the Anaconda Jupyter Notebook program, which will be instrumental in training future models.

Next Steps

- *Keep an open mind about data exploration:*
 - Proactively seeking potentially more useful datasets, particularly those related to power and geographic data.
- *Collaborative dataset finalization:*
 - Scheduled a follow-up meeting to finalize our dataset collaboratively.
 - Aiming to provide other teams with a comprehensive understanding of our research, fostering seamless collaboration and furthering the overall progress of the project.
