

Final Report Info - DUE: 3rd May 2024:

- We've already split up the different sections and have completed some already. Once Martin Hands over the report he has written we can incorporate that into the report and fill in any blanks if we need to, making sure we cover everything in the markscheme and the whole scope of our project.

- **Jacob, Dan, Andreas and Martin will carry on with this**

User Manual Info - DUE: 3rd May 2024:

- Documentation for end users describing functionality and its use - 15% of the final report - Aaron and Andreas will be dealing with this

- Criteria:

- Content and presentation at an appropriate level for the expected user and with correct focus (use of the product).

- Examples of content to consider include (where appropriate) goals of the product; installation and configuration manual; getting started; hardware and software requirements; description of functionality; troubleshooting; data gathering/protection; FAQs; caveats; etc.

- Style, e.g. structure, layout, graphics, spelling and grammar, media content.

- Guidelines to get highest marks possible:**- Content:**

- Ensure that all essential functionalities of the product are covered comprehensively. Expand the depth and clarity of the information provided about each function.

- Improve Presentation and Layout:

- Aim for a clean and organized layout that facilitates easy reading and comprehension. Use headings, subheadings, bullet points, and numbered lists to structure the content logically.

- Enhance Language and Clarity:

- Review and correct any grammatical and spelling errors. Use clear, concise, and appropriate language that matches the understanding level of the expected audience.

- Incorporate High-Quality Graphics:

- Include clear, informative graphics, diagrams, and charts that support and clarify the text. Ensure that all graphics are of high quality and appropriately labeled.

- Address User Level Appropriately:

- Ensure the manual is pitched at the right level for your audience. Avoid overly technical jargon if the manual is intended for general users, or ensure sufficient technical detail if aimed at a specialized audience.

- Originality and Creative Content:

- Infuse originality and creativity in the presentation of the manual. Consider incorporating additional media content such as videos, interactive tutorials, or QR codes that link to online resources.

Software Manual Info - DUE: 3rd May 2024:

- Documentation for software engineer/programmer describing architecture, design, implementation etc - **25% of the final report - Humais, Andreas, Mateusz and Dan will be dealing with this**

- Criteria:

- (Focus, presentation) appropriate for (programmer / software engineer)'s use.
- Use of established SE (documentation) methods, e.g. use cases, sequence diagrams, activity diagrams, class diagrams, data flow diagrams, entity relationship diagrams.
- Content – e.g. project goals, problem description, definitions of jargon, design & architecture, concepts, logical / physical architecture, data storage, frameworks, dependencies, proprietary systems, coding conventions, maintainability conventions, design patterns, testing approaches, installation / build manual, additional online documentation.

- Guidelines to get highest marks possible:

- Content Completion and Clarity:

- Ensure the manual is comprehensive and complete. All essential elements such as architecture, design, algorithms, and principles should be clearly explained.
- Avoid assuming prior knowledge that only experienced professionals would have unless explicitly targeted to that audience. The manual should cater to different levels of understanding and expertise.

- Use of Established Software Engineering Methods:

- Incorporate established software engineering methodologies to structure and present the information. This might include diagrams, pseudocode, flowcharts, and system design descriptions that align with professional standards.

- Detailed and Insightful Information:

- Go beyond general knowledge and provide deep insights into how and why certain decisions were made in the product's development. This should include discussions on architectural choices, algorithmic designs, and the application of programming principles.

- Structure and Organisation:

- The manual should have a logical and easy-to-follow structure. This includes having a clear introduction, well-defined sections, and a coherent flow of content.

- Include a table of contents, indices, and clear headings to make the manual user-friendly.

- Additional Documentation:

- Provide links or references to additional online resources or documentation that can help the reader understand the product more deeply.

Video Info - DUE: 3rd May 2024:

- Presentation/Demonstration Video - doesn't say the percentage on the rubric - Martin and Dixon to come up with ideas for this

- Criteria:

- Content.
- Presentation.
- Quality.
- Creativeness, originality

- Guidelines to get highest marks possible:

- The presentation / video is prepared to a (good / high) standard.
- The (goals / importance / implementation / outcomes) of the project are covered comprehensively and presented with (good / excellent) clarity.

Abstract Info - DUE: 3rd May 2024

- General introduction of the project that talks about and the purpose

- No information given. It is just a text file that contains this text:

Team number: <TEAM NUMBER HERE>

Project title: <PROJECT TITLE HERE>

Academic supervisor: <FIRSTNAME LASTNAME>

Company name: <COMPANY NAME>

Industry supervisor(s): <FIRSTNAME LASTNAME>, <FIRSTNAME LASTNAME>,
<FIRSTNAME LASTNAME>

Abstract:

What individuals need to do:

Individual report - DUE: 15th May 2024

Peer Review - DUE: 15th May 2024

- Just like the one we had to do for last semester
