

- Structure of the presentation day

Formal presentations in the morning

At coffee break - get people to come to our stand

Lunch break - can socialise and network

After lunch is demonstration in the lab

Every project is allocated a 20 minutes to present

- Session chair will coordinate presentations
- teams are expected to attend all presentations in their session
- You re encouraged to attend other sessions

Presentation structure

- Intro - one minute
- Live presentation - 8-10 minutes - what, so what, how, now what - include the presenter in presentations - 5/7 slides - know exactly who will be doing each slide - avoid many speakers 3-4 people presenting
- Live demo - 3-5 minutes max
- Q&A - 5 minutes - agree beforehand on who will take which subject questions - which questions do you fear the most - you don't have to know everything
- What to include in the presentation - the three things you would like to remember from the project - balance between technical knowledge and general everyday talk - audience will be technical but some will not be

- Consider the through line:
 - What is the takeaway idea
 - Focus no the core concept
 - Less can be more
 - Does every element of the talk like to the throughline
- Be concise and to the point - maintain clarity throughout
- Closing - the message you want the users to keep
- Stick within the allocated time

Deliverables:

- Abstract - for programme - 3rd
- Main report, software manual and user manual
