

Minutes Document 15

Date: 06/12/2023

Time: 12:00 AM - 01:30 PM

Location: Computer Science Building, Jubilee Campus, University of Nottingham

Present (in order of attendance):

- Andreas - Team Admin
- Humais - Git Helper
- Daniel - Deputy Git Master
- Martin - Team Leader
- Mateusz - Git Master
- Jacob - Deputy Team Leader
- Aaron - Deputy Team Admin

- Neelima Sailaja - Academic Supervisor - did not show up

Agenda:

- Welcome and introduction (5 minutes):

- Call the meeting to order
- Converse with present team members
- Briefly introduce the purpose of the meeting

- Progress from last week (55 minutes):

- Here is what every team member has done so far this sprint:
 - UI Dev team - Andreas & Aaron - started the implementation of the desktop Web App. What has been done:
 - Loading screen - all visuals done and functionality - the user can click anywhere on the screen and it takes them to the log-in screen.
 - Log-in screen - Visuals are good enough for the prototype and functionality works - the user needs to login using a set password, otherwise they receive a prompt saying that they do not have either the wrong username or password. Also, when the user logs into the system it directs them to the dashboard screen.
 - Dashboard - Visuals are still being developed but main elements like the header and footer are there.

- Andreas also created a git branch for easy organisation and for version control of the code.
- BackEnd Team - Humais & Dixon - Continued with the Backend of the project:
 - Created individual log-ins for the team
 - Shows active users on the database and who has made what changes.
 - Created a backup system for the database.
 - Progress with table population.
 - Created new branches on git to help with organisation and documentation of the backend development process.
 - Dixon has not participated with this.
- AI Dev Team - Jacob, Mateusz and Daniel:
 - Had a separate team meeting within the sprint. This was discussed:
 - How to adapt the data they research towards the use case
 - Looked through existing data and figured out that they need to make an AI optimises the solar power outputs
 - Carry on with the Jupiter NotePad model that jacob has made - going to add weather data as well.
 - Next steps - they find other data that may be useful, they will add it to the existing data.
 - Data set finalisation that is needed.
- Martin:
 - Documentation - will post on teams on what he has done
 - Continued work on the pitch decks.
 - Refined designs on the prototypes.

- Deliverables for next week (30 minutes):

- These are the deliverables for next week:
 - Prototypes somewhat ready for demonstration.
 - Pages that need to be done:
 - Dashboard - Andreas
 - Account Settings - Andreas
 - AI Generation Page - Aaron
 - Data Manager Page - Aaron
 - General Settings Pages - Martin
 - BackEnd Team:
 - Finish populating datasets into tables
 - Optimise queries further
 - Connect backend to frontend
 - AI Team:
 - Carry on with the Jupiter NotePad model that jacob has made - going to add weather data as well.
 - Next steps - they find other data that may be useful, they will add it to the existing data.
 - Data set finalisation that is needed.
 - Presentation materials for the Eviden team.
 - Summary of everything we have done, the process - Martin

Next Meeting: Daily Check-ins - Time: TBC - Place: Every Day
