

Minutes Document 28

Date: 29/03/2024

Time: 3:00 PM - 4:30 PM

Location: Online

Present (in order of attendance):

- **Andreas** - Team Admin
- **Mateusz** - Git Admin
- **Humais** - Git Helper
- **Daniel** - Deputy Git Master
- **Jacob** - Deputy Team Leader
- **Aaron** - Deputy Team Admin
- **Dixon** - Team Member
- **Martin** - Team Leader

Agenda:

- Welcome and introduction (5 minutes):

- Call the meeting to order
- Converse with present team members
- Briefly introduce the purpose of the meeting

- What was discussed (55 minutes):

- Everyone presented their database schemas and webapp mockup designs with these being the key take-aways:

- Andreas's database scheme was the best in terms of having a good foundation, but elements from everyone's need to be used to update this scheme, like having a dedicated vehicle and accessibility table should be implemented.

- Everyone who had created mockup designs, being Andreas, Daniel and Mateusz, presented their ideas and the team agreed that Mateusz came up with the best prototype design.

- Based on this new design, here is what the UI team will have to do - Edit the dashboard so that it is split in half, with the map on the left hand side and the forms on the right. These forms would be done using a tab like design, so there will be three tabs, the form where the user can input their postcode and method of transport - can also input their start time and vehicle number plate?, the different predictions and graphs and then the potential matches page - the team agreed this would be the best design moving forward.

- Look into a way the user can delete their account - after the database has been implemented

- The MLM team discussed ways of creating user data and now have a rough idea on how to do it.

- The times people are not available during the holidays:

- Martin - 15th April - 21st April
- Daniel - 25th April - 29th April
- Aaron - 6th April - 9th April

- Also agreed to have a meeting every three days with any updates that need to be done in between those days - teams can also meet outside that time.

- What we need to do for next Monday (30 Minutes):

- UI Team:

- Edit the dashboard so that it is split in half, with the map on the left hand side and the forms on the right. These forms would be done using a tab like design, so there will be three tabs, the form where the user can input their postcode and method of transport - can also input their start time and vehicle number plate?, the different predictions and graphs and then the potential matches page
- Look at implementing some sort of notification system with emails
- With the redesign, edit the format of the form to make it look more visually appealing
- Set up the page with all the users journeys, and can be a model one until the database is implemented - Look at only showing that to an admin and not to everyone

- MLM Team:

- Work together with the Backend team to get the database schema implemented
- Generate as much data as possible - as much as you are able to - making sure that it adheres to the different fields in the database - work together using the data found by Daniel and the existing data generated by Mateusz to create a good dataset that we can use when presenting.
- Work on some visual graphs like last week and send to the UI team to implement
- Get the matching algorithms and what the team has been working on to a presentable stage working with the backend team to provide the data matching elements.

- Backend Team:

- Choose a suitable platform to host the database on, so it can be accessed by everyone at any time - especially the UI team, as they will be trying to make requests for data.
- Work together with the MLM tem to get the database schema implemented.
- Implemented as much data ase possible given by the MLM team into the database, populating it.
- Look at potential servers to host the Webapp on - mid priority, can speak with Andreas on this point.

- Martin:

- Make sure report is in a viable state to present to the team, making sure it contains all of the work the team has been doing these past few weeks
- Work with the MLM and Backend team to oversee the database creation, making sure it adheres to the schema provided by Andreas.

Next Meeting: Monday 1st April - Time: 2:00PM - 3:00PM - Place: Online
