

## **Meeting Minutes Document 6**

**Date:** 25/10/2023

**Time:** 11:45 AM - 1:50 PM

**Location:** Computer Science Building, Jubilee Campus, University of Nottingham

### **Present (in order of attendance):**

- Andreas - Team Admin
- Mateusz - Git Master
- Jacob - Deputy Team Leader
- Humais - Git Helper
- Dixon - Team Member
- Daniel - Deputy Git Master

### **Agenda:**

#### **- Welcome and introduction (5 minutes):**

- Call the meeting to order
- Converse with present team members
- Briefly introduce the purpose of the meeting

#### **- Video Review (30 minutes):**

- Go round the group and talk about their thoughts and opinions on the videos for each company.
- Make sure that they can explain everything that we claim we know and have skills in.
- Make sure we can answer questions/show evidence for the claims.

#### **- Potential Questions (40 minutes):**

- Take a moment to put yourself in the shoes of the companies we'll be pitching to. What questions might they have?
- Jot down any potential questions you believe the respective companies might ask. This will be invaluable for our preparation.

#### **- Questions for Eviden:**

- How will they support us throughout this project?
- How often do they expect us to be in contact with them - to give them updates.
- If there are any features in particular that they want to see in the project.
- Ask about the Azure Cloud Training Charlotte is doing - if they recommend us to do it as well - we get a certificate - become more certified?

- Are there existing systems or platforms within Eviden that our solution needs to integrate with?
- Will there be an opportunity for end-users or stakeholders within Eviden to provide feedback? - Can cater the final product to their needs.
- What motivates the team to work on this project for Eviden?
- Develop on our use case that we mentioned?
- What is the suggested approach for selecting a cloud platform?
- What methodology is Team 39 planning to use for project development, and why is it chosen?
- What version control system is mentioned, and how is it intended to be used by the team?
- How will AI technologies be integrated into the solution, and what is their role?
- What steps are being taken to ensure security and data protection in the project?
- How will the solution's impact on sustainability metrics be monitored and evaluated?
- What is the significance of maintaining comprehensive documentation in this project?
- How does the team express its commitment to sustainability in the field of computer science?

**- Question for MHR:**

- Why have you chosen to implement Agile within the Scrum framework for this project? What advantages do you see in this approach?
- Can you explain the specific roles and responsibilities of team members in this Agile-Scrum setup?
- Can you explain the specific roles and responsibilities of team members in this Agile-Scrum setup?
- Could you elaborate on your approach to gathering requirements from stakeholders, potential users, and experts? How will you prioritise and manage these requirements?
- Why have you chosen web scraping tools like BeautifulSoup to collect data? Are there any concerns related to copyright or data privacy?
- What led to the decision to use MySQL for the database system? What are the advantages of this choice?
- Can you provide more details about the natural language processing (NLP) libraries and large language models (LLMs) you plan to use? How will they contribute to the project's success?
- How do you intend to ensure data security and privacy while handling user profiles and interaction data?
- Can you explain the process of content categorisation and analysis in more detail? How will it impact the user experience?

- What is your strategy for encouraging users to create profiles and engage with the system? How will you ensure user adoption and engagement?

**- Question for BrowneJacobson:**

- Is there a limit for the size of the contracts?
- Could there be multiple files submitted at the same time to merge/correct information?
- Will the program interact with any of your systems? (eg will we be sending the final contract to your system or just save it?)
- Is it always the same format for the contracts?

**- UML Diagram Creation (50 minutes):**

- Andreas and Jacob created UML Use Case diagrams for each project, outlining how a typical user or users would use the system.
- This was a chance to break down what the brief was asking and what the group needs to implement.

**Next Meeting:** Thursday 25th October - Time: 9:00AM - Place: Computer Science Building - First Meeting.

**Respectfully submitted** by Andreas Sergiou

**Reviewed** by Jacob Stephens
